

Generational Farming

Watershed sustainability

Woman-owned

Generational Farming in Northwest Ohio

From our agricultural practices to our family heritage, sustainability is at the center of Graminex. 6,500 acres of farmland in northwest Ohio encircle our flower pollen processing plant. From cover-cropping to local employment, we take our sustainability pledge seriously. This philosophy has spanned three generations and continues to play an important role in sustaining the health and fertility of the Lake Erie Watershed.

■ Lake Erie Watershed

Women operated and family-owned for three generations.

Fourth generation surveying harvest.
