Lightening cream

BEAUTYCEUTICAL BY EYTELIA

## Bioactivated Silicium

Through its link with collagen, elastin, keratin and proteoglycans, silicium contributes to the architecture, strenght, durability and elasticity of connective tissue.

## Niacinamide - Phytic acid - Pancratium maritium extract Potassium azeloyl diglycinate

Decreases the natural tanning process

## Panocratium maritium extract

Prevents melanin synthesis  
Reduces surfaces & pigmentation of dark spots  
Inhibits melanin synthesis triggered by stressed keratinocytes

## Vitamin C, Tocopherol

Prevents skin Photoaging

## Phytic acid

Gently peels & promotes cell renewal

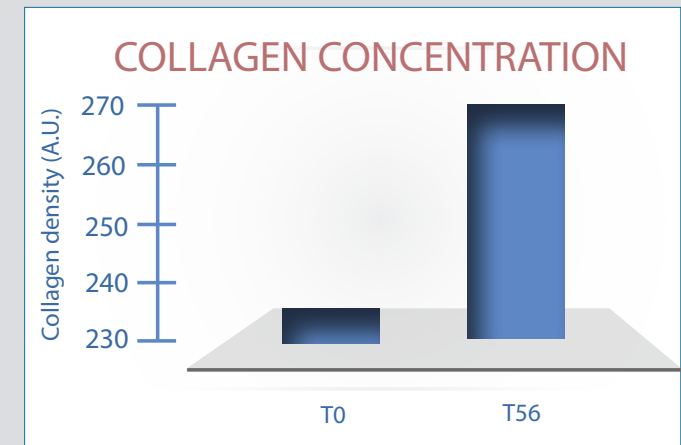

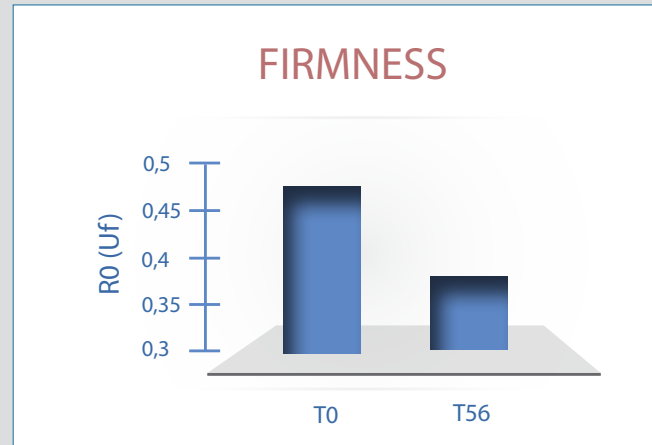

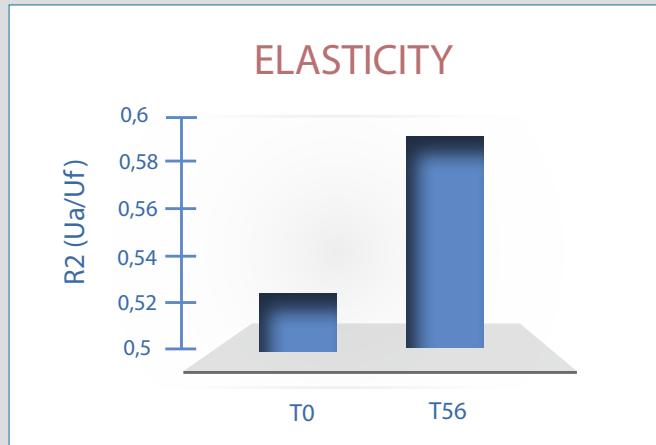

## Potassium azeloyl diglycinate

Prevents melanin production

## Bisabolol

Soothes the skin

# BIOACTIVATED SILICIUM PREVENTS SKIN AGING

Skin elasticity and firmness increase significantly after use of Bioactivated Silicium molecules as demonstrated respectively by Ua/Uf parameter increase and Uf parameter decrease.

Study performed with women aged between 45 and 65 years  
Comparison of values at the beginning of the study and after 56 days of Bioactivated Silicium molecules application

**Bioactivated Silicium improves skin hydration, firmness and collagen content**

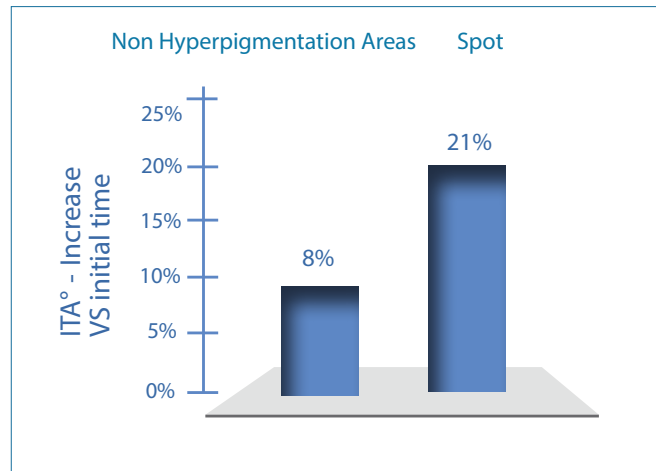

# LIGHTENING EFFECTS

Increase in skin whiteness on non-hyperpigmented areas and on stained areas after 56 days of treatment

SKIN WHITENESS

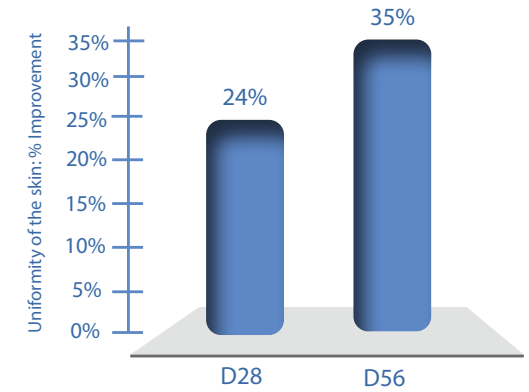

INCREASING

I.T.A.° = whiteness of the skin

Uniformity

IMPROVEMENT

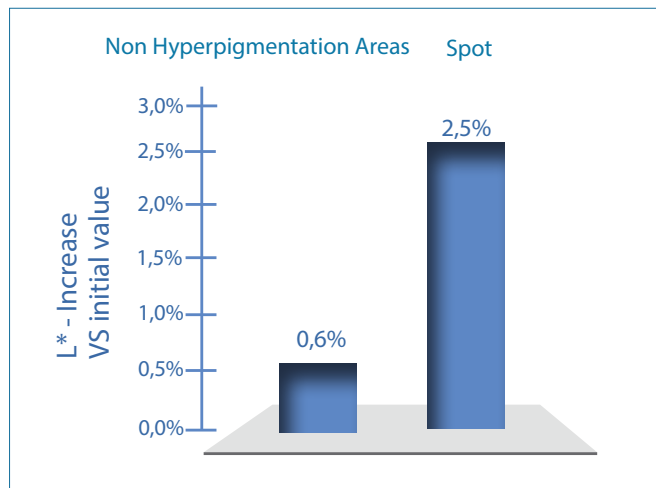

Increase in skin luminosity on non-hyperpigmented and spot areas after 56 days of treatment

Luminosity

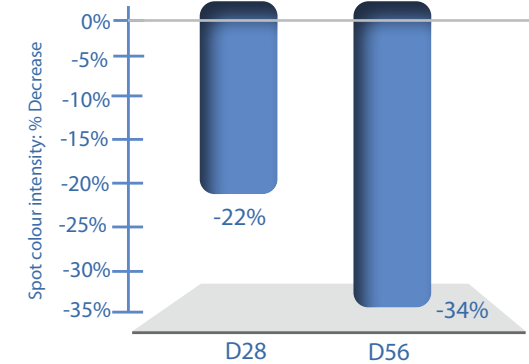

INCREASING

L\* = brightness of the skin

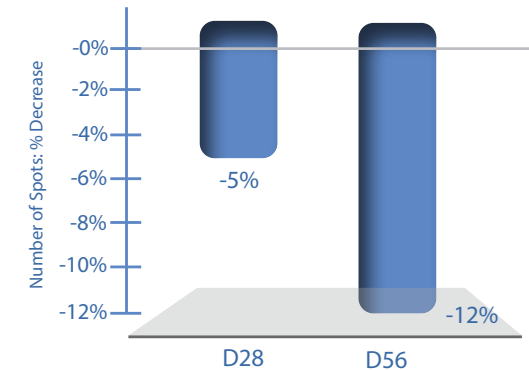

Spot colour intensity

DECREASING

Number of spots in the face

DECREASING

# SILXPERT® PERFECT SKIN LIGHTENING

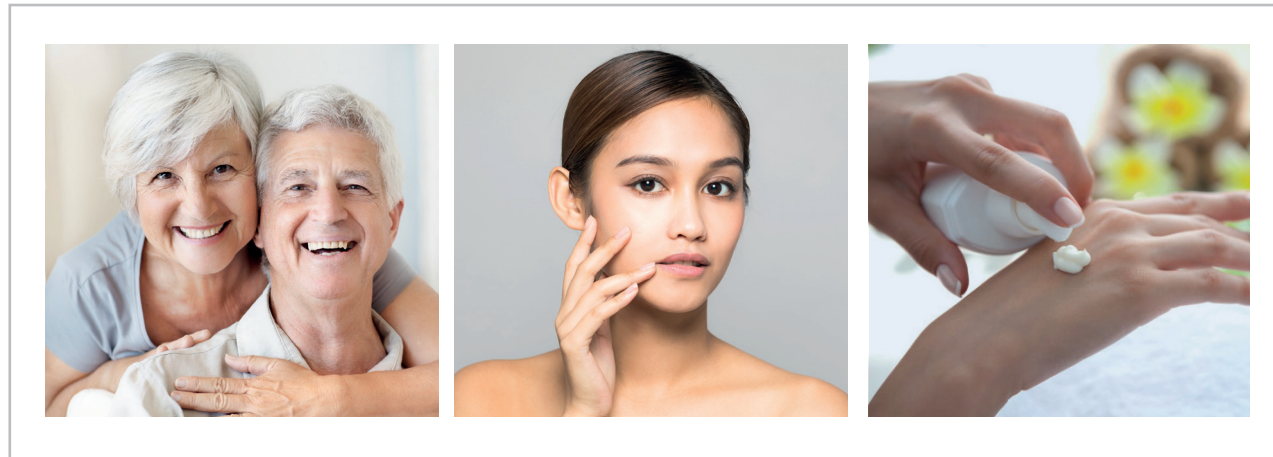

Aging skin  
Dark spots  
Wrinkles

Bioactivated Silicium
