

**What exactly is OneDrop?**

OneDrop is a cutting-edge herbal supplement that ensures the body has full access to the active ingredients of herbs. Traditional supplement forms, such as powders, capsules, syrups, tablets, and teas, have low bioavailability.

These are highly concentrated liquid extracts that can be added to any dish or beverage. OneDrop is the most convenient, effective, versatile and adaptable method of consuming herbs.

**How should these drops be used?**

While it is best to take these drops with water or tea, they can also be taken with juice, soup, milk, shakes, sweets, or even drinks. It can also be used in the kitchen. Here are a few examples of common applications:

1. When her children go to school, Divya gives them Tulsi + Cardamom water in their water bottle. This combination changes every day. Sometimes it's turmeric and ginger, other times it's tulsi and rosemary, and so on. She always adds turmeric or cinnamon or cardamom or a combination to the milk she gives her kids

2. Ashok keeps them in the office and drinks them with his favourite green tea or masala chai. He prefers a combination of ginger and cardamom, or just Tulsi or Cinnamon.

3. Indira enjoys OneDrop Turmeric Latte in her morning filter coffee and serves it to her family. It's a hit with her in-laws! She also uses the onedrop spices as marinade, that gives her outstanding results, every time.

**How are they superior to other herbal supplements?**

Because OneDrop can be mixed with any food or beverage, incorporating herbal nutrition into your daily routine is simple. These are highly effective functional foods, not medications. They are exceedingly comforting and

improve your physical and mental well-being. OneDrop products have a very high absorption of their medicinal active ingredients for three reasons.

1. You can drink them with water; anything you drink or eat with fluids is more easily absorbed. Herbs consumed as powders, capsules, gels, or pills have a reduced bioavailability.
2. These products are created using a cutting-edge nanotechnology process that reduces the active ingredients to nano-size; the smaller the size, the better the absorption.
3. Typically, we consume herbs at home by making decoctions, kadha, kashayam, or tea. These methods extract only a small portion of the water-soluble actives. The most valuable and potent ones are in oil form, which is lost in these preparations. However, with OneDrop, you can enjoy the full potential of the herbs. As a result, OneDrop is better than consuming fresh herbs.

**Who manufactures these products? Are they safe?**

Durmeric Naturaceuticals Pvt Ltd. manufactures these products at its own facility using a patented nanotechnology process. This facility adheres to the strictest quality standards, from sourcing to packaging, and uses child-safe ingredients. It is certified for GMP, ISO 22000 and HACCP standards. This is also an USFDA-registered facility. These products are classified as 'functional foods' rather than 'medicines' or 'drugs.' As a result, they are FSSAI-licensed and suitable for daily use. Durmeric operates from NABARD-supported facility at TNAU's Govt. Agricultural College in Madurai.

Furthermore, NABARD - MABIF, IIT Kanpur and the BITS Pilani @ Goa have incubated and support Durmeric (OneDrop).

So, these are unquestionably safe products that you and your family can use on a daily basis.
